

20TH ORIENTAL CONGRESS OF CARDIOLOGY (OCC) 2026

28-31 May 2026 | Shanghai World Expo Center, China

Introduction

From 28 to 31 May 2026, OrbusNeich took part in the 20th Oriental Congress of Cardiology (OCC), engaging with interventional cardiologists, healthcare professionals, and industry partners in Shanghai while showcasing its latest innovations in interventional cardiology.

Guided by its commitment to "Simplify the Complex," the company highlighted solutions designed to support physicians in managing challenging PCI procedures and complex coronary anatomies.

GuidingArk® Launch

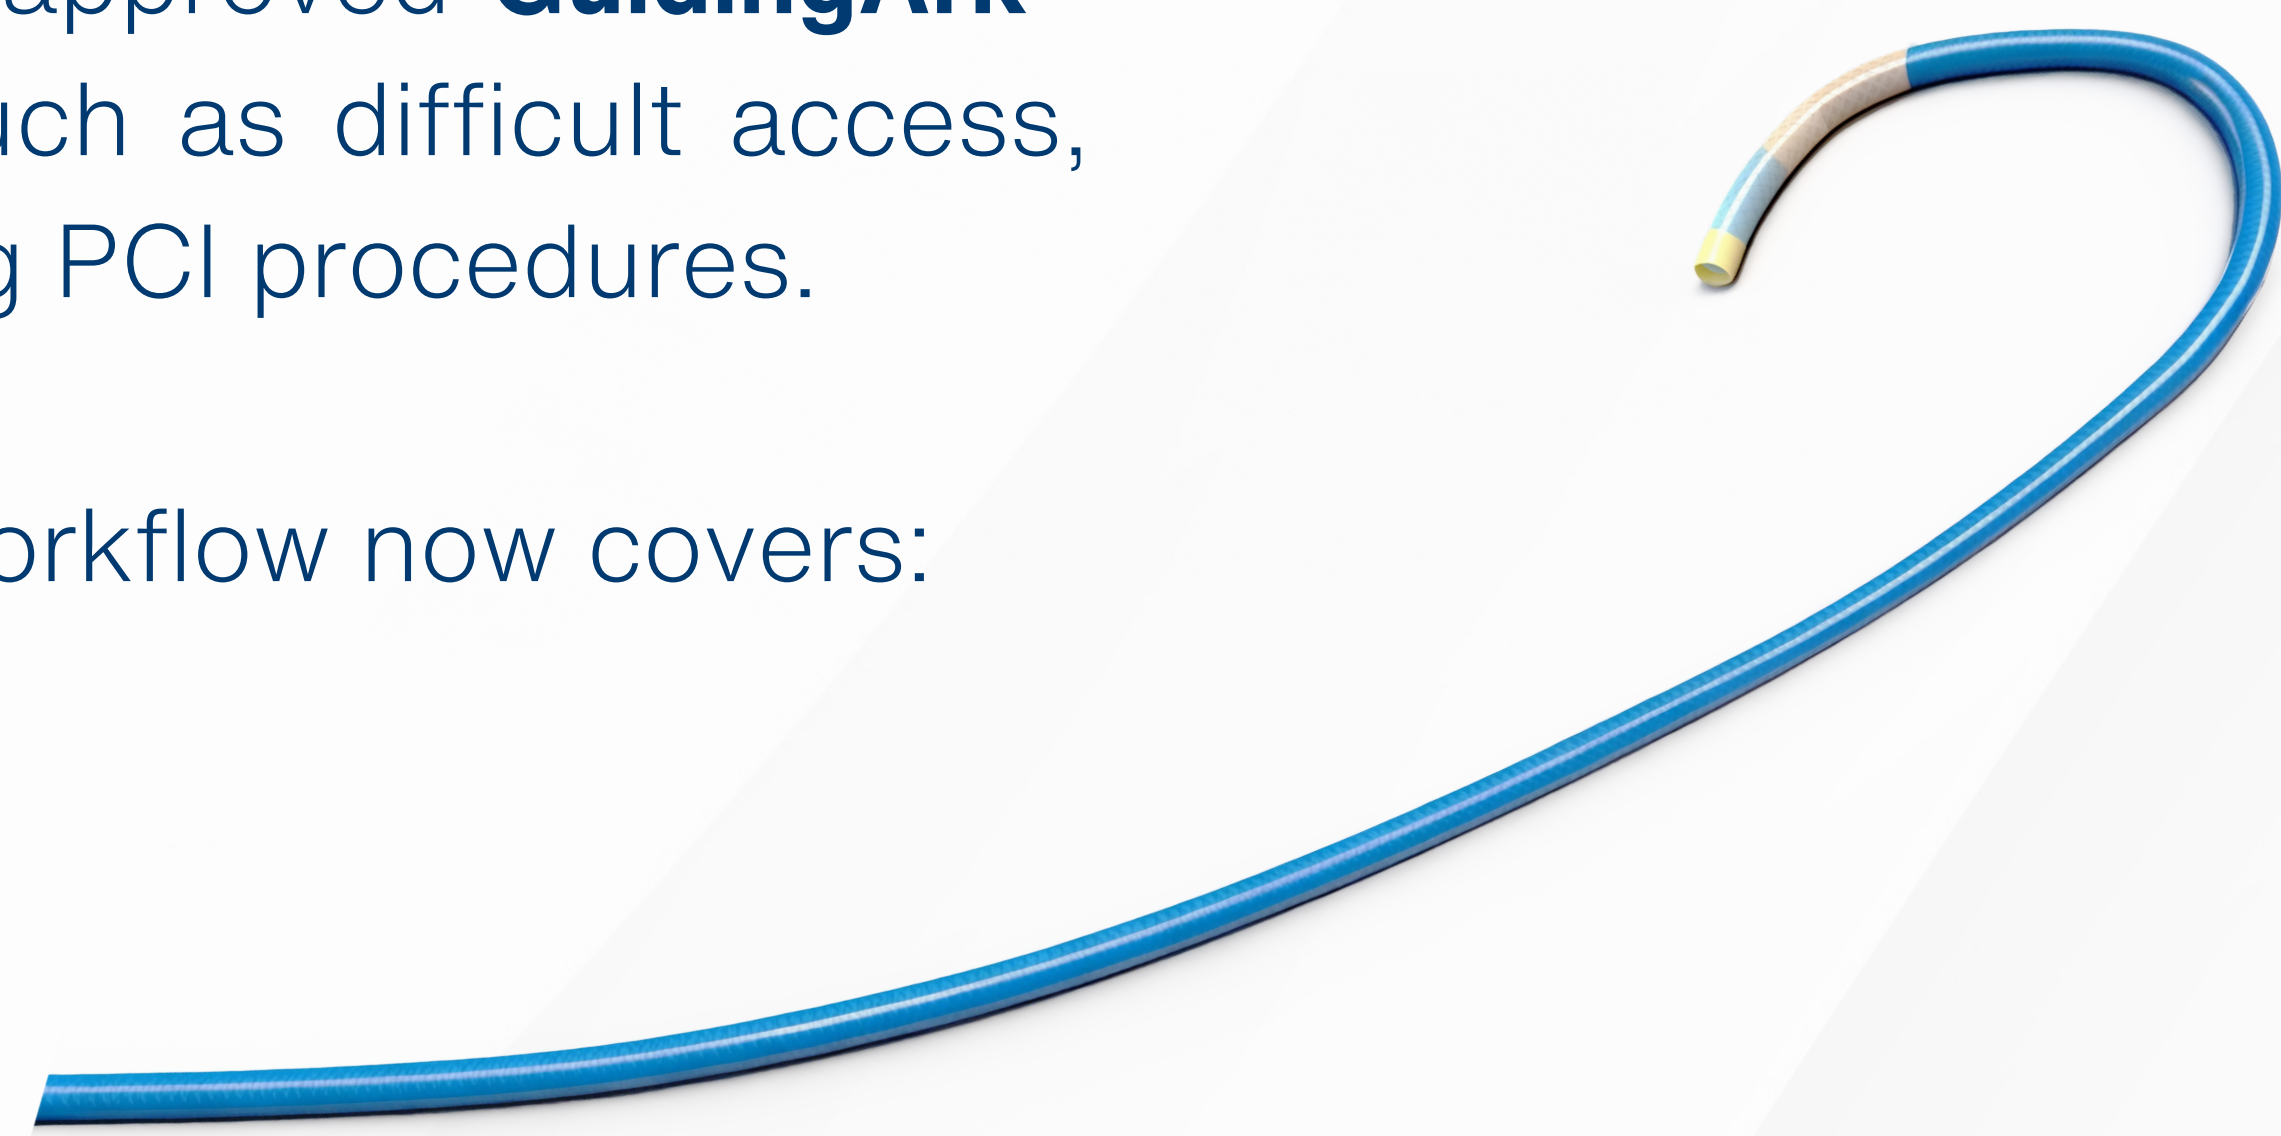

At the event, OrbusNeich introduced the newly-approved **GuidingArk®** guiding catheter, addressing common issues such as difficult access, poor deliverability, and insufficient support during PCI procedures.

With its launch, the company's comprehensive workflow now covers:

- **Access establishment**
- **Lesion crossing**
- **Lesion preparation**

Through an integrated portfolio combining:

- **GuidingArk®**
- **Xtenza®**
- **Teleport®**
- **Scoreflex® Family**
- **Pre- and post-dilatation balloon catheters**

Interactive Experiences

Visitors to the OrbusNeich booth also had the opportunity to experience the complete treatment pathway through a coronary intervention simulator. The demonstrations facilitated valuable discussions, allowing clinicians to evaluate product performance and share practical insights from their daily practice. The positive feedback received not only affirmed the performance of the portfolio, but also provided important guidance for future product enhancements.

Through continued collaboration with the clinical community and a focus on addressing evolving needs, OrbusNeich remains committed to advancing cardiovascular care and delivering practical solutions that improve procedural outcomes and patient care.
